Carl Zeiss Neurosurgery Purchase Order

Optiscan is pleased to announce it has today accepted the first purchase order from Carl Zeiss for its neurosurgery systems.

As foreshadowed in the shareholder update of June 6, these are pre-production prototypes of Optiscan's rigid endomicroscopy system for neurosurgery to be exclusively supplied to Carl Zeiss, the world's number one supplier of neurosurgical visualisation equipment. The systems will facilitate the final steps in the regulatory process, and it is expected they will be deployed in clinical trials with key opinion leaders.

The order, valued at approximately \$800,000, is expected to be fulfilled in August as assembly of the prototypes is already largely complete.

This order marks a major milestone in the development of the neurosurgery market for Optiscan's technology in partnership with the relevant world leader, Carl Zeiss.

About Optiscan

Optiscan is a global leader in microscopic imaging technologies for medical markets. Optiscan's unique and patented technologies enable high-powered microscopes to be miniaturised and used inside the body. The technology enables microscopic imaging of up to 1000 times magnification to be achieved. Doctors can use the technology to instantly see cellular level details of tissue without the requirement to surgically remove tissue (biopsy).
