Optiscan shipment commences product revenues from Pentax

Optiscan announced today that it has commenced shipping completed flexible endo-microscope product to Pentax.

The first shipment has now been exported from Australia and will partially fill Pentax's initial order for 20 confocal imaging systems and 25 miniaturised scanner sets.

"This shipment marks the commencement of revenues for Optiscan, with the expectation of further shipments and orders to follow" said Matthew Barnett, Optiscan CEO.

In the lead up to formal product release, Pentax will use the shipped product to finalise its own production procedures and to supply approved clinical trial sites that are able to utilise the instrument prior to regulatory approval being obtained.

Optiscan is currently engaged in discussion with Pentax on the size and timing of follow up orders.
